

Asrith Cheepurupalli.

DESIGN ENGINEER · FULL-STACK

work.asrithcheepurupalli@gmail.com · Visakhapatnam, India (remote) · asrithcheepurupalli.tech ·
github.com/asrithcheepurupalli · linkedin.com/in/asrithcheepurupalli

A design engineer who owns entire features end to end, from API design to the final UI. I do taste-level product design and ship it myself in React, TypeScript, and Node, so the design and the code never get lost in a handoff. I take products from a sentence to a live site, solo, and I finish what I start.

SELECTED WORK

made. table

full-stack · React/TS · AI

An AI-assisted product where one line of intent composes a whole branded, structured experience. Owned the full stack: React and Next.js frontend, the API layer, the Anthropic SDK integration with structured output, and a Supabase/Postgres backend. Designed the system and built it solo.

Next.js · React · TypeScript · Node · Anthropic SDK · Supabase/Postgres

made. design system

design system · component-based

A token-driven design system and React component library that powers every product I ship: design tokens, reusable components, typography and motion primitives, and the documentation that keeps it consistent. The source of truth for a dozen live properties.

Design tokens · React component library · Figma · design documentation

karu (made. labs)

reading/editorial UX · motion

A story-first, editorial reading experience for handcrafted work: typography, layout, micro-interactions, and scene-based motion built to make long-form content feel immersive on any screen. Directly relevant to a reading and media platform.

Next.js · editorial layout · motion (GSAP) · responsive, accessible UI

meanwhile (made. labs)

art direction · scroll-driven motion

A concept brand built from a blank page: architectural, negative-space art direction with scroll-driven GSAP and Lenis motion and an interactive demo. Pure taste and interaction craft, no client brief.

React · Vite · GSAP · Lenis · motion design

Somaa

full-stack · production · real client

A live operations platform running in a real venue, shipped to a client on a deadline: per-table ordering as a PWA, phone OTP auth, REST APIs, POS integration, and an owner dashboard. Designed the brand and built the product front to back.

React · Next.js · Supabase/Postgres · REST APIs · PWA

HomeCast

Node.js · real-time · tested

A synchronized multi-device audio prototype: a Node.js and WebSocket backend with an AudioWorklet pipeline and NTP-style clock sync for tight cross-device alignment. End-to-end tested.

Node.js · WebSockets · real-time sync · e2e testing

Adda

mobile · consumer · React Native

A premium, playful social map of your city: friend-powered food, places, and events with ranked lists and map-based review cards. A native mobile app, designed and built in React Native and Expo.

React Native · Expo · TypeScript · mobile UX

SKILLS

FULL-STACK Own features end to end, API design to final UI. React, Next.js, TypeScript, Node, Python, FastAPI, REST APIs, PostgreSQL, Supabase

DESIGN Product and UX design, Figma, design systems, component-based design, brand and art direction, motion (GSAP, Framer Motion)

FRONTEND Responsive and accessible React interfaces, Tailwind, micro-interactions

CLOUD & CI/CD AWS (Cloud Practitioner), Docker, GitHub Actions, testing, deployment, Vercel, Netlify

AI LLM integration, Anthropic SDK, structured output, prompt engineering

EDUCATION

B.Tech, Computer Science

Gayatri Vidya Parishad College of Engineering · 2023 to 2027

Coursework: DSA, Operating Systems, DBMS, Computer Networks, AI, ML

CERTIFICATIONS

- AWS Cloud Practitioner
- Prompt Engineering and Programming with OpenAI, Columbia University
- Google IT Automation with Python

ALSO

Founder, made. by ac (design and engineering studio). 12+ live products shipped solo across consumer, client, and concept work.
